Educational Reform

ABSTRACT
This study explores the integration of digital literacy and entrepreneurship into the curriculum of Islamic boarding schools (pesantren) to promote economic empowerment. Utilizing a qualitative research methodology with a literature review approach, the research examines existing studies, educational models, and theoretical frameworks that support the inclusion of these contemporary skills in pesantren education. The findings highlight the potential benefits of equipping students with digital competencies and entrepreneurial knowledge, which are crucial for achieving economic independence in the digital era. The study identifies best practices and successful case studies from various pesantren that have implemented such curriculum reforms. Additionally, it discusses the challenges and opportunities associated with this educational transformation, including the need for teacher training, curriculum development, and resource allocation. The research concludes that integrating digital literacy and entrepreneurship into pesantren curriculum can significantly enhance the economic prospects of students, thereby contributing to broader socio-economic development. Recommendations for policymakers, educators, and stakeholders are provided to facilitate the effective adoption and implementation of these curricular changes.

INTRODUCTION
The rapid advancements in digital technology have fundamentally transformed various sectors of society, including education. Traditional educational institutions, such as Islamic boarding schools (pesantren), face significant challenges in adapting to these changes while maintaining their cultural and religious values. As the global economy increasingly relies on digital skills and entrepreneurial thinking, there is a pressing need for educational reforms that can equip pesantren students with the necessary competencies to thrive in the modern world (Wahana et al., 2023).

Pesantren, which have historically focused on religious education and moral development, are now at a crossroads. The conventional curriculum, while effective in imparting religious knowledge, often lacks components that address contemporary economic realities. This gap can potentially limit the economic opportunities available to pesantren graduates, many of whom may struggle to compete in an increasingly digitalized and entrepreneurial job market. Integrating digital literacy and
entrepreneurship into the pesantren curriculum is seen as a viable solution to bridge this gap (Sulistyawati et al., 2022).

Digital literacy encompasses a range of skills necessary for effectively using digital technologies, including information retrieval, digital communication, and critical thinking in digital environments. These skills are essential not only for personal development but also for participation in the digital economy. Entrepreneurship education, on the other hand, fosters innovation, creativity, and business acumen. It empowers students to create their own economic opportunities through the establishment of small enterprises and startups. Studies have shown that integrating digital literacy and entrepreneurship into educational curricula can significantly enhance students' economic prospects. For pesantren students, this integration could mean a more comprehensive education that prepares them for both religious leadership and economic self-sufficiency. However, achieving this integration presents several challenges, including the need for teacher training, curriculum development, and adequate resource allocation (Maulida & Ali, 2023).

Several pesantren in Indonesia and other countries have begun experimenting with curriculum reforms that incorporate digital literacy and entrepreneurship. These initiatives have shown promising results, indicating that students not only gain new skills but also develop a more innovative and proactive mindset (Maulida & Ali, 2023). These case studies provide valuable insights into best practices and potential pitfalls, offering a roadmap for other pesantren to follow. Despite the potential benefits, there are also significant barriers to implementation. Resistance to change from traditionalists within the pesantren community, limited access to digital infrastructure, and a lack of trained educators are some of the challenges that need to be addressed. Overcoming these obstacles requires a concerted effort from policymakers, educators, and stakeholders at various levels (Eraku et al., 2021).

The integration of digital literacy and entrepreneurship into the pesantren curriculum aligns with broader national and international educational goals. It supports initiatives aimed at reducing unemployment, promoting economic development, and fostering a culture of innovation. By empowering students with these skills, pesantren can play a crucial role in driving socio-economic progress in their communities (Sulistyawati et al., 2022). This study aims to explore the integration of digital literacy and entrepreneurship in pesantren education through a qualitative literature review. By examining existing research, educational models, and theoretical frameworks, the study seeks to identify effective strategies for curriculum reform. It also aims to highlight the challenges and opportunities associated with this transformation, providing recommendations for successful implementation. Integrating digital literacy and entrepreneurship into the pesantren curriculum is not just a matter of educational reform but a strategic imperative for economic empowerment. As pesantren navigate the complexities of the digital era, these curricular innovations hold the promise of preparing students for a future where they can contribute meaningfully to both their religious communities and the broader economy (Khomsatun et al., 2022).

**RESEARCH METHOD**

This study employs a qualitative research design utilizing a literature review approach. This method is chosen to provide a comprehensive understanding of the integration of digital literacy and entrepreneurship into the pesantren curriculum. By analyzing existing literature, educational models, and theoretical frameworks, the study aims to identify effective strategies and highlight challenges and opportunities associated with this educational transformation. Data for this research will be collected through an extensive review of secondary sources (Muiz, 2023). These sources will include: (1) Academic Journals: Peer-reviewed articles that discuss digital literacy, entrepreneurship education, and curriculum development in the context of Islamic education and pesantren; (2) Books and Monographs: Relevant books that provide theoretical and practical insights into digital literacy, entrepreneurship, and educational reforms; and (3) Government and NGO Reports: Documents and reports from governmental bodies and non-governmental organizations that focus on educational policies, digital inclusion, and economic empowerment in pesantren. These sources will be
systematically identified using academic databases such as Google Scholar, JSTOR, and ERIC, as well as libraries and institutional repositories.

The data analysis will follow a structured approach to synthesize and interpret the collected information: (1) Thematic Analysis. The data will be analyzed thematically to identify key themes and patterns related to the integration of digital literacy and entrepreneurship in pesantren. This involves coding the data, categorizing it into themes, and identifying relationships between these themes; (2) Content analysis will be used to systematically examine the text of the collected documents. This will involve identifying recurring concepts, practices, and recommendations in the literature, which will be categorized and analyzed for their relevance and applicability to pesantren education; (3) A comparative analysis will be conducted to compare different case studies and educational models. This will help in understanding the varying approaches to curriculum integration, the outcomes achieved, and the contextual factors that influence success or failure; (4) Synthesis of Findings. The findings from thematic, content, and comparative analyses will be synthesized to draw comprehensive conclusions about the integration of digital literacy and entrepreneurship into the pesantren curriculum. This synthesis will help in formulating recommendations for policymakers, educators, and stakeholders; and (5) Validation of Findings (Eraku et al., 2021). To ensure the validity of the findings, triangulation will be used by comparing insights from different types of sources (academic, governmental, NGO reports, and case studies). This will enhance the credibility and reliability of the conclusions drawn.

The research methodology involving a qualitative design with a literature review approach, systematic data collection, and rigorous data analysis will provide a robust framework for exploring and understanding the integration of digital literacy and entrepreneurship in the pesantren curriculum for economic empowerment.

RESULT AND DISCUSSION

Current State of Pesantren Education

Pesantren, as Islamic boarding schools, have a rich historical and cultural heritage in Indonesia. Rooted in centuries-old traditions, these institutions are dedicated to providing religious education and moral guidance based on Islamic teachings. The traditional pesantren curriculum primarily focuses on the study of classical Islamic sciences, including Quranic studies, Hadith (Prophetic traditions), Fiqh (Islamic jurisprudence), and Arabic language. This education system emphasizes rote memorization, rigorous discipline, and a deep commitment to religious and ethical values (Wahana et al., 2023).

The pesantren system instills strong religious and moral values in students, fostering a sense of community, discipline, and spiritual development. Pesantren are often deeply integrated into local communities, providing social and spiritual support and acting as centers for communal activities. The emphasis on character building and ethical conduct prepares students to be morally upright individuals and community leaders. The traditional curriculum often lacks components that address contemporary skills such as digital literacy, critical thinking, and entrepreneurial abilities. Graduates may find it challenging to compete in the modern job market, which increasingly demands digital competencies and innovative thinking. The curriculum may not always align with national education standards, limiting students' opportunities for further education and professional development (Supriyono, 2022).

As the world rapidly advances into the digital era, the need for modernization in pesantren education becomes increasingly apparent. Several driving factors necessitate the integration of digital literacy and entrepreneurship into the pesantren curriculum (Darajat et al., 2022). The global economy is becoming more interconnected, with digital skills being essential for participation in the international marketplace. Pesantren graduates need to be equipped with these skills to access better employment opportunities and to compete globally. The job market is evolving, with many traditional jobs being replaced by those requiring digital competencies. There is a growing demand for tech-savvy professionals and entrepreneurs who can innovate and adapt to technological advancements.

Today's youth are more exposed to digital technology and have higher expectations for their education. They seek knowledge that is relevant and applicable to their lives in a digitalized world.
Educated individuals with digital and entrepreneurial skills can contribute significantly to the economic development of their communities, fostering local businesses and social enterprises. The rapid pace of digital transformation across all sectors necessitates the inclusion of digital literacy in education. Skills such as coding, digital communication, and data analysis are becoming fundamental. Technology has lowered the barriers to entry for entrepreneurship, enabling individuals to start and grow businesses with minimal initial investment. Integrating entrepreneurship education can help students harness these opportunities (Sulistyawati et al., 2022).

The modernization of the pesantren curriculum by integrating digital literacy and entrepreneurship is essential to address these economic, social, and technological changes. This transformation will not only enhance the employability and economic prospects of pesantren graduates but also ensure that these institutions continue to play a vital role in the spiritual and communal life of their students. By balancing traditional religious education with modern skills, pesantren can provide a holistic education that prepares students for the challenges and opportunities of the 21st century (Harahap et al., 2024).

**Digital Literacy in Pesantren**

Digital literacy refers to the ability to effectively and critically navigate, evaluate, and create information using a range of digital technologies. It encompasses skills such as: (1) Using digital devices and software; (2) Understanding and utilizing the internet and social media; (3) Evaluating digital information sources for credibility and relevance; (4) Creating digital content, including text, images, audio, and video; and (5) Communicating and collaborating through digital platforms.

Digital literacy is crucial for participation in the modern economy, where many jobs require digital skills. It enables individuals to access and create job opportunities, enhancing employability and economic mobility. Digital tools and resources provide access to a vast array of information and learning materials, enriching the educational experience and facilitating lifelong learning. Digital literacy fosters global connectivity, allowing individuals to communicate, collaborate, and share knowledge across geographic boundaries. Informed digital citizens can engage more effectively in societal issues, participate in digital governance, and advocate for social causes. Digital skills are fundamental for innovation and entrepreneurship, enabling the creation and growth of new businesses, particularly in technology-driven sectors (Hamid, 2023).

Developing comprehensive training programs for teachers to enhance their digital competencies. This includes workshops, online courses, and hands-on training sessions to familiarize educators with digital tools and teaching methodologies. Organizing regular workshops and boot camps for students to build their digital skills (Eraku et al., 2021). These can cover topics such as basic computer skills, internet safety, coding, and digital content creation.

Implementing e-learning platforms that provide access to digital educational resources, interactive lessons, and online assessments. Platforms like Google Classroom, Moodle, and Khan Academy can be utilized. Establishing digital libraries that offer a wide range of e-books, journals, and multimedia resources to support both religious and secular education. Incorporating educational software and apps that enhance learning experiences in subjects such as mathematics, science, and languages. Ensuring reliable internet connectivity within the pesantren to facilitate access to online resources and tools. Providing necessary digital devices, such as computers, tablets, and projectors, to support digital learning activities. Establishing technical support teams to maintain digital infrastructure and assist users with technical issues.

**Entrepreneurship Education in Pesantren**

Entrepreneurship education equips students with the skills needed to start and manage their own businesses. This is crucial for economic self-sufficiency, as it enables individuals to create their own income opportunities and reduce reliance on external employment. Entrepreneurship encourages innovation and creative problem-solving (Maulidizen, 2019c). Students learn to identify market needs, develop new products or services, and implement solutions effectively. Entrepreneurial graduates can contribute to local economic development by establishing businesses that create jobs and provide
services within their communities (Hamid, 2023). This helps in alleviating poverty and promoting sustainable economic growth. Entrepreneurial skills foster adaptability and resilience. Students learn to navigate uncertainties and challenges, which is essential in today’s rapidly changing economic landscape (Maulidizen, 2019a).

Basic courses covering the principles of entrepreneurship, business models, and the entrepreneurial mindset. Advanced courses focusing on business plan development, financial management, marketing, and operations. Courses that explore the role of technology in business innovation and how to leverage digital tools for entrepreneurial success (Hamid, 2023).

Practical workshops where students can work on real-world business projects, from ideation to execution. Sessions with successful entrepreneurs and industry experts to provide insights and mentorship (Rouf et al., 2024). Partnerships with local businesses to offer students hands-on experience and exposure to entrepreneurial activities. Establish small-scale businesses within the pesantren, managed by students under faculty supervision. This provides practical experience in running a business (Mas’udah et al., 2022). Create clubs where students can collaborate on entrepreneurial projects, organize events, and participate in competitions. Encourage students to identify local issues and develop entrepreneurial solutions, fostering a sense of social entrepreneurship (Maulidizen, 2019b).

Challenges and Opportunities
Pesantren have deep-rooted traditions and cultural norms that may prioritize religious education over secular subjects like entrepreneurship. Traditionalists may view entrepreneurship education as incompatible with religious teachings or fear dilution of traditional values. Involve influential community leaders, parents, and alumni in discussions about the benefits of entrepreneurship education. Emphasize how entrepreneurship can align with Islamic teachings on ethics, charity (zakat), and community service. Start with pilot programs or extracurricular activities to demonstrate positive outcomes before full integration. Conduct workshops and seminars to educate stakeholders about the importance of holistic education that includes entrepreneurship (Sulistyawati et al., 2022).

Budget allocations for curriculum development, teacher training, digital infrastructure, and ongoing support programs. Access to adequate physical space, digital devices (computers, tablets), internet connectivity, and educational materials (Lubis et al., 2022). Seek funding from local, regional, or national government programs supporting educational innovation and entrepreneurship. Collaborate with non-governmental organizations focused on education, youth empowerment, and community development. Partner with private companies interested in supporting educational initiatives as part of their corporate social responsibility (CSR) programs. Launch crowdfunding campaigns to raise funds from alumni, parents, and the broader community who value entrepreneurship education (Tarihoran & Nikmatullah, 2023).

Addressing institutional resistance, securing adequate resources, and bridging the digital divide are essential steps in successfully integrating entrepreneurship education into pesantren curricula. By overcoming these challenges with strategic planning, community engagement, and innovative partnerships, pesantren can empower students with the skills and knowledge necessary for economic self-sufficiency and leadership in the 21st-century digital economy (Sulistyawati et al., 2022).

Impact on Economic Empowerment
Methods for Assessing Impact: (1) Employment Rates. Measure the percentage of pesantren graduates who secure employment in sectors requiring digital and entrepreneurial skills; (2) Income Levels. Evaluate the income levels of graduates compared to non-graduates or those from traditional pesantren programs; (3) Entrepreneurship Success. Track the number of graduates who start their own businesses and their sustainability over time; (4) Community Development. Assess the impact of student-led initiatives on local economic growth, job creation, and community empowerment; and (5) Surveys and Interviews. Conduct surveys and interviews with graduates, employers, and community members to gather qualitative feedback on the perceived impact of the integrated curriculum (Lubis et al., 2022).
Potential Long-term Benefits: (1) Improved Employment Opportunities. Graduates equipped with digital literacy and entrepreneurship skills are more competitive in the job market, particularly in sectors such as technology, e-commerce, and digital marketing; (2) Entrepreneurial Ventures. Alumni are empowered to establish sustainable businesses, contributing to economic growth and job creation within their communities; (3) Innovation and Adaptability. Skills acquired through entrepreneurship education enable graduates to innovate, adapt to market changes, and seize emerging opportunities; and (4) Community Leadership. Alumni may become community leaders, advocating for economic development initiatives and contributing to social welfare through philanthropy and zakat distribution (Oktafia et al., 2024).

Recommendations for Policymakers and Educational Authorities (1) Curriculum Integration. Encourage and incentivize pesantren to integrate digital literacy and entrepreneurship education into their curricula through policy directives and funding support; (2) Teacher Training: Provide professional development programs for educators to enhance their digital and entrepreneurial teaching competencies; (3) Infrastructure Investment. Allocate resources for upgrading digital infrastructure within pesantren campuses, ensuring equitable access to technology for all students; (4) Partnerships and Collaborations: Foster partnerships between pesantren, universities, businesses, and NGOs to enrich educational resources and opportunities for students; (4) Monitoring and Evaluation. Establish mechanisms for monitoring and evaluating the effectiveness of entrepreneurship programs, with a focus on outcomes related to economic empowerment and community development; and (5) Policy Advocacy. Advocate for policies that recognize the importance of holistic education in pesantren, blending religious instruction with modern skills to prepare students for diverse societal roles.

The integration of digital literacy and entrepreneurship education in pesantren has the potential to significantly impact economic empowerment by enhancing graduates’ employability, fostering entrepreneurial ventures, and promoting community development. Policymakers and educational authorities play a crucial role in supporting these initiatives through policy frameworks that prioritize innovation, skills development, and sustainable economic growth in pesantren education. By investing in these areas, policymakers can empower pesantren students to thrive in the digital economy and contribute positively to their communities’ socio-economic development.

CONCLUSION

The integration of digital literacy and entrepreneurship education into pesantren curricula represents a transformative approach to enhancing economic empowerment and community development. By equipping students with essential digital skills and entrepreneurial acumen, pesantren can effectively prepare graduates for success in the 21st-century economy. Assessing the impact of these integrated programs involves measuring employment rates, income levels, and the success of entrepreneurial ventures initiated by graduates. Long-term benefits include improved employment opportunities, sustainable business creation, and heightened community leadership among alumni. To support and scale these initiatives, policymakers and educational authorities should prioritize curriculum integration, teacher training, infrastructure investment, and strategic partnerships. By doing so, they can ensure that pesantren education remains relevant and adaptive, empowering students to contribute meaningfully to economic growth and social welfare in their communities. In conclusion, the proactive integration of digital literacy and entrepreneurship education not only enhances individual prospects but also fosters resilient communities capable of thriving in the digital age (Zulkarnain, 2023).
